

EVANS VANODINE GREENTICK PRODUCTS

GREENTICK LOW IMPACT PRODUCTS

HOW DOES INDUSTRY JUDGE WHETHER A CHEMICAL HAS A HIGH OR LOW IMPACT ON THE ENVIRONMENT?

Every chemical has some impact on the environment, even water can have a detrimental effect. At Evans Vanodine, we have developed an innovative system for classifying each of our products according to their overall environmental impact. Our system scores products based on eight different criteria. The criteria selected are used to create a holistic life cycle view of the processes and product and also align with the UN Sustainable Development Goals.

Every product in the Evans range is analysed using the GreenTick system. The lower the overall product score, the lower the impact on the environment. Products which achieve a low impact rating are identified with a GreenTick logo on the label.

OPTIMUM PERFORMANCE - MINIMUM IMPACT

One advantage of scoring all our products against GreenTick methodology is that it enables us to highlight the lowest impact product within each product category. This helps users to choose the lowest impact product suitable for their cleaning task. Using a low impact product to carry out a cleaning task in the wrong circumstance does not serve the best interest of the environment, therefore it is important to:

- **Select the right product for the job.**
- **Use the recommended dilution rate.**
- **Dispose of chemical responsibly.**

Evans Vanodine has achieved certification with the Planet Mark and holds ISO 9001 and ISO 14001 accreditations, highlighting our commitment and dedication to the environment and sustainability.

Please see our dedicated environment website for more detailed information:
